

MochiFox Tokenomics & Distribution (Single-Wallet Plan)

Project: MochiFox (MOCHFX)

Network: Base

Contract: 0x793fA1236782a2f7D2c6Eb624B92aCc9e6fFDAb1

Decimals: 18

Total Supply: 1,000,000,000 MOCHFX

TGE Model: All tokens are minted at TGE to a single operational wallet. Liquidity, marketing, and community allocations will be deployed from this wallet over time.

Allocation & Schedule

Allocation Name	% of Supply	TGE (%)	Cliff (Months)	Vesting (Months)	Release Schedule
Main Operational Wallet	100%	100	0	0	Immediate (no smart-contract vesting)

Main Operational Wallet (EOA): [add your wallet address here]

Distribution Approach

- Tokens will be moved from the Main Operational Wallet to create or add liquidity on DEXs (e.g., Uniswap on Base) when needed.
- Grants, rewards, and partnerships will be distributed directly from the Main Operational Wallet based on campaign needs.
- Any treasury movements (e.g., reserves or future locks) will originate from the Main Operational Wallet and be transparently visible on BaseScan.

Locking / Vesting

- The token contract does not enforce vesting or time locks.
- If we later use third-party lockers or multisig timelocks, we will publish the lock addresses, amounts, and unlock dates.

Circulating Supply Methodology

- Circulating supply is calculated as: **Total Supply – (Burned Tokens + Verifiably Locked Tokens)**.
- Tokens held in the Main Operational Wallet are considered non-circulating until transferred to liquidity pools, rewards, or external public wallets.
- Any burn (e.g., 0x0000...dead) or lock addresses will be disclosed publicly.

Explorer & References

- **BaseScan (Contract):** 0x793fA1236782a2f7D2c6Eb624B92aCc9e6fFDAb1

- **Symbol (strict):** MOCHFX (use this exact symbol across forms and listings)
